

AN INTRODUCTION, AHEAD OF THE ROADS MANAGEMENT INSIGHTS SHOWCASE

Crashfree India

We fix dangerous roads with students, experts
and the authorities. Your data can tell us where.

18 cities · 31 sites audited · 25+ approvals in writing

Next: India's first School Safety Index — 2,000 school zones

Inside district road-safety committees in Gurugram & Jaipur

Backed by a 3-year, US\$3M commitment from Cars24

A young nonprofit that builds capacity for road safety work

Registered as the Vision Zero Trust · co-founded by Cars24 and the Indian Road Safety Council, June 2025.

- 

With authorities

We work alongside PWDs, police and district administrations — never around them.
- 

Evidence first

Every audit anchored to IRC codes; every claim to published data.
- 

Students + experts

Trained student teams do the ground work, senior experts verify it.
- 

Public goods

Everything we build is published free for any authority to use.

CFI footprint — 18 cities across India

18

cities with active CFI work

20

institutions — incl. 9 IITs — engaged

75+

road-engineering interns trained

US\$3M

Cars24 commitment over three years

Six public-facing programmes, **all running today**

One line on each — then this deck goes deep on the two where Google Maps data changes the game.

Project Rakshak

Student-audited, expert-verified road fixes — walked through authorities until built.

25+ approvals in writing

School Safety Index

India's first public index of school-zone road safety — in design, launching next.

2,000 school zones planned

SATARK enforcement tech

Camera + billboard tech that helps police target repeat violators fairly.

3,00,000+ vehicles scanned

Victim support suite

Aasha 24/7 chatbot, compensation calculator, hospital legal helpdesks.

100+ victims in first 4 days

Road safety in the Supreme Court of India.

Every systemic road-safety case before the Supreme Court — public interest litigation, suo motu matters and appeals that produced nationwide directions — tracked order by order, alongside the judgments that set precedent for crash victims.

Last refreshed 1 Aug 2026 · Source: Indian Kanoun (Supreme Court judgments + daily orders) · Refreshes automatically every Tuesday

[Browse the docket](#)

Open data public goods

SC litigation tracker, defect repository, Parliament tracker, crash dashboards.

146 districts · 13 languages

Youth & public campaigns

NextMile ideathon, dialogue series, MS Dhoni as Goodwill Ambassador.

2,000+ young participants

Trained students audit dangerous roads — and we walk each fix **through** the authority until it is built

Students audit

31 student audit teams from 20 institutions — including 9 IITs — survey sites on IRC codes and MoRTH checklists.

Experts verify

Every audit reviewed by senior engineers, guided by Prof. Geetam Tiwari (IIT Delhi, IRC H-7).

Authorities build

Recommendations handed to the road-owning authority; CFI tracks every site from submission to completion.

YEAR-ONE FUNNEL

Global evidence: low-cost engineering fixes of this kind cut crashes 20–50% at treated sites (iRAP / World Bank).

Guntur junction — audited, approved, redesigned

Authorities are building our fixes. What we cannot yet measure is the after.

APPROVALS IN WRITING, FROM

PWD Kerala

PWD Uttar Pradesh

PWD Punjab

CPWD

R&B Andhra Pradesh

GCC Chennai

ADDA Durgapur

Addl. Collector, Indore

Built interventions — footpaths, markings, parking, signage, drainage

Every site tracked in public — submission to completion

The missing layer: measurement

We know what was built. We cannot yet see, at network scale, what changed —

vehicle speeds before and after each fix, exposure around each site, risk on the corridors we haven't audited yet.

That is exactly the data Roads Management Insights holds.

Next build: India's first School Safety Index

In design now — a public, district-wise score of how safe the road outside every school actually is.

- **A standard rubric**

44 scored checks across 13 sections, aligned to IRC:SP:32-2023 — the same standard authorities use.
- **Scaled by students**

College audit teams and trained Zone Captains — the Rakshak model, pointed at school zones.
- **2,000 school zones**

Across 15+ cities in the first wave; every score public, every gap actionable by the district.
- **Built to rank**

Districts compete to climb; parents and authorities see the same number.

 The hard part is not the checklist — it is speed and exposure data around 2,000 schools. Collecting it manually is slow and patchy. Maps data makes it systematic.

Four places your data **plugs straight into our work**

Roads Management Insights is live in India. Here is what it unlocks, programme by programme.

Prioritise

RMI segment speeds & risk insights → choose the next 100 Rakshak sites by evidence, not anecdote.

PROJECT RAKSHAK

Score

Speed and exposure layers around schools → the data backbone of the School Safety Index, 2,000 zones at once.

SCHOOL SAFETY INDEX

Prove

Before-and-after speeds at treated sites → India's first measured evidence base for low-cost road fixes.

IMPACT EVALUATION

Publish

Verified school zones & audit findings back to Google → ground truth for accident-prone alerts, beyond 4 cities.

OPEN DATA — BOTH WAYS

Precedent: Google.org already funds iRAP's Star Rating for Schools with US\$2M — deployed in Vietnam. India has no lead partner yet.

RMI serves governments. We already sit inside the government machinery.

District machinery

Formal member of 4 District Road Safety Committees — Gurugram, SW Delhi, NW Delhi, Jaipur. MoUs with Jaipur Traffic Police and Gurugram Police.

Authority relationships

Written approvals from 8 road-owning authorities across 6 states — we know how files move, and how to move them.

Academic bench

Prof. Geetam Tiwari (IRC H-7) and experts from 9 IITs verify our work — credibility your government clients recognise.

Corporate stability

Cars24's 3-year US\$3M commitment and MS Dhoni as Goodwill Ambassador — a partner built to last, not a pilot NGO.

Your Nov 2025 safety launch covers Gurugram and Jaipur. Those are the two districts where we hold committee seats and police MoUs.

Three concrete ways to start — **smallest first**

1

Pilot where we overlap

Gurugram or Jaipur: RMI data + Rakshak audits + our DRSC seat. One city, 90 days, results presented to the district committee.

START: 90 DAYS

2

School Safety Index partnership

Co-design the SSI data layer — RMI speeds & exposure as scoring inputs for the first 2,000 school zones. India's answer to Star Rating for Schools.

START: WITH SSI WAVE 1

3

Joint impact study

Before-and-after evaluation of implemented Rakshak fixes using RMI — published openly, first-of-its-kind evidence for India.

START: 15 LIVE SITES

WE BRING

Ground teams in 18 cities · government access & committee seats · IIT-verified method · open publication

WE ASK

RMI data access for one pilot geography · a working session with the Lepton + Maps team to scope it

Your maps see every road in India. Together, they can start fixing them.

Thank you — we look forward to the Roads Management Insights showcase.
