

FOR DISCUSSION · CRASHFREE INDIA × TRAFFICURE · GOOGLE MAPS PLATFORM

The safety layer

Traffic data already manages congestion.
Together it can start preventing crashes.

-  Lead idea: the School Safety Index, prototype built, launching with government
-  Second idea: live crash hotspots, solved together through Project Rakshak
-  Both run through government doors we already hold open

Ideas to shape together. Nothing here is a commitment.

Crashfree India School Safety Index DELHI NCR PILDT - METHOD v0.1 Rankings Methodology

**How safe is the road outside the school gate?
We grade it, school by school, in public.**

Each school's road frontage is assessed from dated Google Street View imagery against the visible requirements of IRC SP-32:2023 — India's school-zone road standard — scored by an AI auditor, independently verified, and published with the exact evidence images. Lowest grades first: they are the priority list.

3,814 schools identified across Delhi NCR	90% have Street View imagery	54% imagery from 2024 or newer	5 audits published (verified)	5 graded C or D — priority sites
---	--	--	---	--

Rankings — worst first

#	GRADE	SCHOOL	SCORE	IMAGERY DATE	STATUS
1	D	Tiksha Modern Public School F-3528, Hanuman Mandir Road, Block F, Sadaspur, Karawal Nagar, New Delhi, Delhi, 110090, India	03/00	2026-04	VERIFIED
2	D	Sona Modern Public School - Best CBSE School in Kharpur, Delhi A-3/4, Devi Rd, Kharpur Village, Kharpur, New Delhi, Delhi 110080, India	01/00	2026-04	VERIFIED
3	D	Raghubir Singh modern school 126, Road No. 7, Rajni Enclave, Vikas Nagar, Dimgal Vihar, Uttam Nagar, Delhi, 110059, India	10/100	2022-04, 2025-11	VERIFIED
4	D	Ganga International School, Rohini pocket 8, Sector 21, Rohini, New Delhi, Delhi, 110088, India	15/100	2026-04	VERIFIED
5	D	Rookford Convent Sr Sec School Shalvi Park Colony, Sector 10A, Gurgaon, Haryana 122001, India	30/100	2026-04	VERIFIED

Grades reflect visible infrastructure on the imagery date only — see the [methodology](#) for scope, limits and the correction process. Scores within ±5 points are equivalent. A low grade is a demand on the road-owning authority, not a criticism of the school. Audits are published in small verified batches; this table grows continuously.

School Safety Index, Delhi NCR prototype, live.

Road-Infrastructure Defect Repository, live.

What TrafficCure is, and what Pune proved

Software only. No cameras, no sensors. Google Maps probe data, turned into a working tool for the people who run the roads.

- 

Built by Lepton Software

Google Maps Platform Premier Partner, working with Google since 2010. TrafficCure launched 2025.
- 

Runs on Roads Management Insights

Google's public-sector traffic feed, launched Aug 2025. Every road, refreshed every 2 minutes.
- 

Live with Pune City Traffic Police

Deployed January 2026, activated in weeks. Corridors also measured in Delhi, Hyderabad, Ahmedabad.

WHY PUNE MATTERS TO US

The police did not stop at watching traffic.

They ranked their worst junctions, diagnosed why each fails, and handed the municipal corporation an engineering brief. Fixes got built.

Data → ranked list → brief to authority → built fix.

That is exactly how Project Rakshak works. Same operating theory, different data.

THE PUNE RESULT, POLICE-MEASURED

Five signals in the feed, **read through a safety lens**

The product was built to manage traffic. Every signal in it has a second life in safety.

Live speeds

Every road, every 2 minutes

How fast traffic really moves past a school gate at 8 am.

Speed history

Hourly, by road, in BigQuery

Baselines: what is normal, what changed after a fix was built.

Vehicle counts

Per road, per hour

Exposure: how many vehicles pass the danger. $\text{Priority} = \text{risk} \times \text{exposure}$.

NEW · MAY 2026

Harsh braking

Anonymised points, junction scale

Near-misses, visible before the crash. Their guide calls it the safety signal nobody else has.

NEW · MAY 2026

User-reported incidents

Crashes and hazards, from Maps users

Incidents the official record may never see.

NEW · MAY 2026

Two ideas we believe in, **one small one, and our questions**

1

Idea 01 • School Safety Index × speed

The centrepiece: what is built, why it matters, the plan, and how we do it together.

05 – 08

2

Idea 02 • Live hotspots × Project Rakshak

The feed keeps the crash map alive; Rakshak turns it into audits, joint plans and built fixes.

09 – 10

3

Idea 03 • The DRSC data pack

Small and immediate: the feed, summarised monthly, on the table where districts decide.

11

4

About us, briefly

Who we are and SATARK, our enforcement platform with police.

12 – 13

5

Next steps

Three steps, two questions, one date to fix.

14

A public grade for the road outside every school gate

Prototype built and live. It grades the road, never the school, against IRC:SP:32, India's own school-zone standard.

3,814

Delhi NCR schools mapped, prototype live

44

checks per school zone, from IRC:SP:32

0–100

score per school, evidence photos pinned

How a school gets its grade

Street View imagery of the gate zone, scored by an AI auditor, independently verified before anything is published.

Grades that demand action

A low grade is a demand on the road-owning authority: the missing crossing, the absent speed hump, the broken footpath.

Launch with government, planned

Public launch being prepared with a government partner; our four district committee seats carry the worst zones into the statutory forum.

Crashfree India School Safety Index

How safe is the road outside the school gate?
We grade it, school by school, in public.

Each school's road footage is assessed from street-level imagery against the visible requirements of IRC:SP:32-2023 — India's school zone road standard — scored by an AI auditor, independently verified, and published with the exact evidence images. Lowest grades first: they are the priority list.

Scores

ASPECT	SCORE	COMMENTS	AUDITOR'S NOTE
PI speed calming	80%	MISSING	No crossing shown in the Street View.
PI pedestrian crossing	80%	MISSING	No marked crossing at or near the gate.
PI footpath	80%	MISSING	Footpath is not visible in the imagery.

A school's report card, evidence pinned.

Children die at fixable places, and nobody keeps score

The standard exists. The danger is measurable. What is missing is a public number that makes someone act.

A number parents understand

A grade at the gate makes invisible risk visible to the people with the most reason to demand the fix.

A number authorities can act on

Worst-first rankings become work orders: which 10 zones, which fixes, this budget cycle — through committees we already sit on.

A number that proves change

Re-grade after the fix is built. With the speed layer, the improvement is measured, not claimed.

From prototype to public institution

Four phases. The first is done. The speed layer is where TrafficCure changes what this can be.

The honest gate: the speed layer ships only if RMI segments resolve short gate streets and school-run-hour slices. One technical session on 10 corridors we have already defined settles it in a week.

Clear roles, **three steps**, one date

We hold the method and the government seats. You hold the data and the tooling. The launch names both.

CRASHFREE INDIA

- ✓ Index method, verification, publication
- ✓ Field checks by student teams at worst-graded zones
- ✓ DRSC resolutions and the government launch

TRAFFICURE + GOOGLE

- ✓ Speed, braking and count layers per school zone
- ✓ Corridor tooling and school-run-hour slices
- ✓ Terms for a public, attributed, nonprofit index

NEXT STEPS

1

This week

Technical session: Lepton + Maps + CFI on 10 gate corridors, already defined on our cloud project.

2

Weeks 2 – 6

Joint speed-exposure scoring on the ~100-zone launch batch, thresholds agreed up front.

3

Launch window

Government launch of the index with the speed layer in, both names on it.

Keep the crash map alive, then fix what it shows

Official blackspot lists update every few years. The feed can refresh the danger map monthly — and Rakshak already turns danger maps into built fixes.

Why it works: every piece already runs. 150+ audits planned this year, 15 fixes in implementation, 25+ authority approvals, dashboards live. The feed adds the one thing we cannot make: a danger map that never goes stale.

Nothing to invent — three moves to make

The audit machine, the government doors and the public dashboard exist. The feed plugs into all three.

96

police-mapped crash clusters in Jaipur, 361
GPS-located crashes

150+

blackspot audits planned this Rakshak year

75+

implementations targeted, each with a build
date

4

district committees where a joint plan can be
tabled

1 Overlay

Harsh braking + speeds over Jaipur's 96 clusters. Does the
feed see the danger police already know? Four weeks,
answer either way.

2 Baseline

Subscribe corridors for 2 Rakshak sites entering
construction now — so before/after proof starts with the
build, not after it.

3 Dashboard

A live speed panel per site on the public Rakshak
dashboard: 'measured with Google road data'. The joint
plan, visible to everyone.

The honest gate: if braking density is too thin at Jaipur's clusters, idea 02 narrows to before/after proof only — still worth having, and we say so in writing at day 30.

The DRSC data pack: the feed, where decisions are made

District Road Safety Committees meet on a statutory calendar and decide with anecdotes. We sit on four of them.

What it is

One page per district, every month: speeds on the worst corridors, school-gate speeds, changes since last meeting. We format it; the committee decides with it.

Why it is easy

Feed access for four districts, a template, nothing else. Live within a month of access; no product build, no launch, no risk.

What it does for you

Google's data enters the statutory record of four districts, every month, attributed — the quietest, fastest government-partnership story in this deck.

THE PACK, EACH MONTH

- ✓ Worst 5 corridors by measured speed
- ✓ School gates above safe speed at 8 am
- ✓ Change since last meeting, corridor by corridor
- ✓ One before/after: did last month's action work?

Six lines of work, one connected system

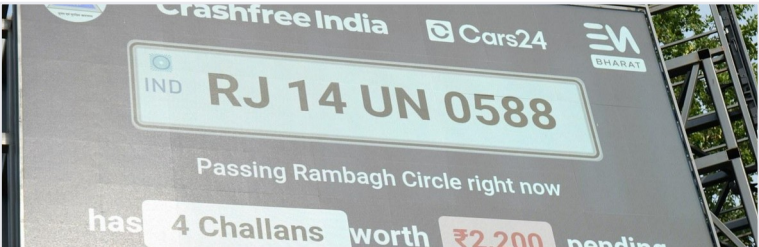

A nonprofit registered as the Vision Zero Trust · Co-founded by Cars24 and the Indian Road Safety Council · 18 cities · everything below is live.

Project Rakshak

Student-led road audits, fixed with authorities

31 sites · 15 in implementation

SATARK enforcement

AI support that helps police find high-risk vehicles

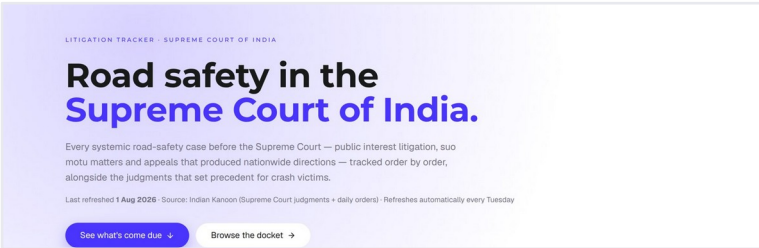

3,00,000+ vehicles screened

Victim support

Aasha chatbot, calculator, hospital helpdesks

100+ victims helped in first 4 days

Open public data

Four self-updating data platforms, free to use

36 states & 50 cities covered

School Safety Index

Public grading of school-zone road safety

3,814 Delhi NCR schools mapped

Youth & policy

NextMile ideathon and national dialogue series

2,000+ participants engaged

SATARK: AI that helps police stop the right vehicle

Built with Cars24 engineers. Reads number plates, checks government records, and alerts officers to repeat offenders, in real time.

Rambagh Circle, Jaipur, live plate, pending challans and dues on a public billboard.

Officer view, challans, RC & compliance status.

3,00,000+

vehicles screened

₹30 Cr+

pending challan value identified

350+

high-risk vehicles intercepted

70,019

vehicles found with pending challans

LIVE · Jaipur & Bengaluru

NEW · Gurugram

Bengaluru's Trinity Circle billboard was India's first, covered by Deccan Herald and national press. Pune and Ahmedabad are next.

Three steps, two questions, one date to fix

Everything on our side is funded and ready. The first step costs one afternoon.

THREE STEPS

1 Fix the technical session

Lepton + Maps + CFI, on real data: 10 school-gate corridors and Jaipur's 96 crash clusters, ready on our configured cloud project.

2 Run the two overlays

SSI speed scoring on the ~100-zone launch batch; braking over Jaipur's clusters. Thresholds agreed up front, results shared either way.

3 Put both names on what survives

The index launch with government, and the live speed panel on the Rakshak dashboard.

TWO QUESTIONS

Access & terms

Can a nonprofit public index sit on the feed — braking and counts included — with attribution? Through Google, Lepton, or both?

Which doors matter

Which cities and stories help TrafficCure and RMI most next quarter? Our seats and MoUs work best pointed somewhere specific.

Traffic data already runs the daily commute. Together it can start preventing the crash.

Two ideas we believe in, one small one, and a technical session that settles the open questions in an afternoon.
