Crashfree India

Application to Working Group 3: Safe Vehicles, Commercial Transport & Future Mobility

Published research on gig and two-wheeler rider risk, a 300-rider study under way

Vehicle standards work with the people who wrote them: ARAI, CMVR-TSC, CIRT

Compliance technology proven with police: 3,00,000+ vehicles screened by SATARK

MS DHONI · GOODWILL AMBASSADOR,
CRASHFREE INDIA

A letter to the Working Group

New Delhi · August 2026

Respected Chairperson and Members of Working Group 3,

Crashfree India is a young road safety nonprofit, registered as the Vision Zero Trust, co-founded with the Indian Road Safety Council, and backed by a three-year, US\$3 million commitment from Cars24. Our work meets this Working Group where the risk is growing fastest: two-wheeler riders, the commercial and gig fleets they increasingly ride for, and the standards and technology that keep vehicles safe and compliant. Through Cars24 we also carry an industry vantage point into vehicle markets, fleet operations and used-vehicle certification. MS Dhoni carries this message to the country as our Goodwill Ambassador.

Two-wheeler riders are the largest and fastest-growing category of road deaths, and gig and delivery riders spend entire working days inside that risk. We published 'When Risks Become Routine', our study of gig-rider road risk, in February 2026, and a 300-rider study is now in the field to quantify what it surfaced. Expert sessions on two-wheeler ADAS and bus fire safety have brought veterans of ARAI, CMVR-TSC and CIRT to our table, and an early review of ride-hailing vehicles found 56.8% carrying more than three recorded challans. SATARK, our vehicle-screening platform with police in three cities, shows compliance technology working at scale.

The pages that follow introduce the organisation briefly, then set out the work most relevant to this Working Group in the detail its mandate deserves. Everything shown is running today, is public, and is offered to the Board without cost. We would be honoured to contribute.

Respectfully,

Akhtar Hussain

Mission Lead, Crashfree India · akhtar@crashfreeindia.org · crashfreeindia.org

Five sections, from who we are to what we offer

1

About us, and how we work

Who we are, our approach to the road crash crisis, and why this Working Group.

04 – 06

2

What we have built

Every public-facing programme, audits, enforcement tech, victim support, open data, youth, campaigns.

07 – 14

3

Our people

The team, its capabilities, and the expert bench around the work.

15 – 16

4

Gig & two-wheeler safety in depth

The deep dive matched to this Working Group's mandate, evidence, method, results.

17 – 24

5

How we can contribute

Four concrete, no-cost offers to the Working Group.

25 – 26

Crashfree India: a nonprofit that adds **capacity** to road safety work

Registered as the Vision Zero Trust · Co-founded by Cars24 and the Indian Road Safety Council · Working since June 2025 · New Delhi

- 

Evidence first

Structured field audits, file reviews and research to official standards, not opinion.
- 

Institutional collaboration

We work through PWDs, NHAI, transport departments, police and District Road Safety Committees.
- 

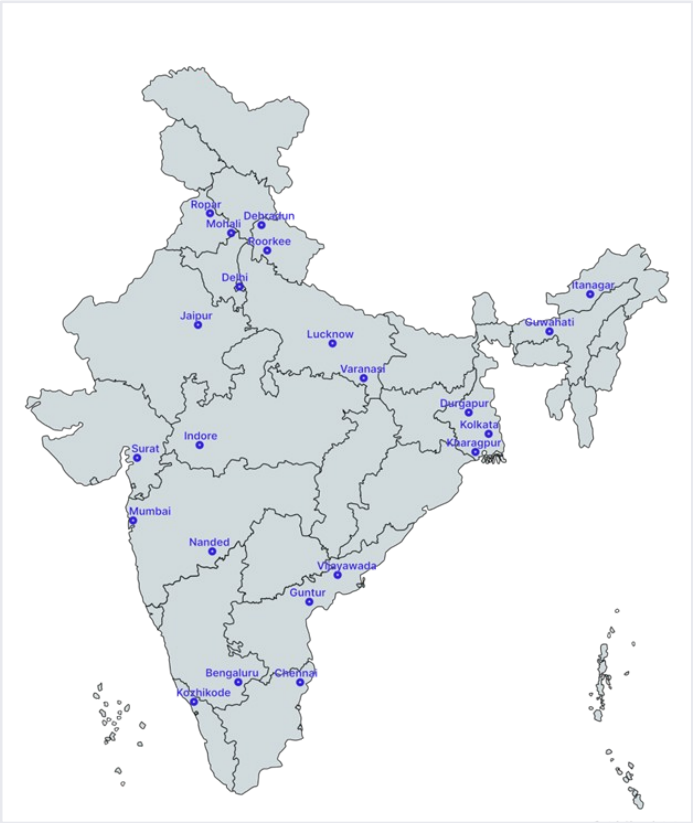

Youth-led capacity

Trained student teams from IITs, NITs and SPAs add the auditing hands the system needs.
- 

Technology for follow-through

Public dashboards track every recommendation from submission to completion.

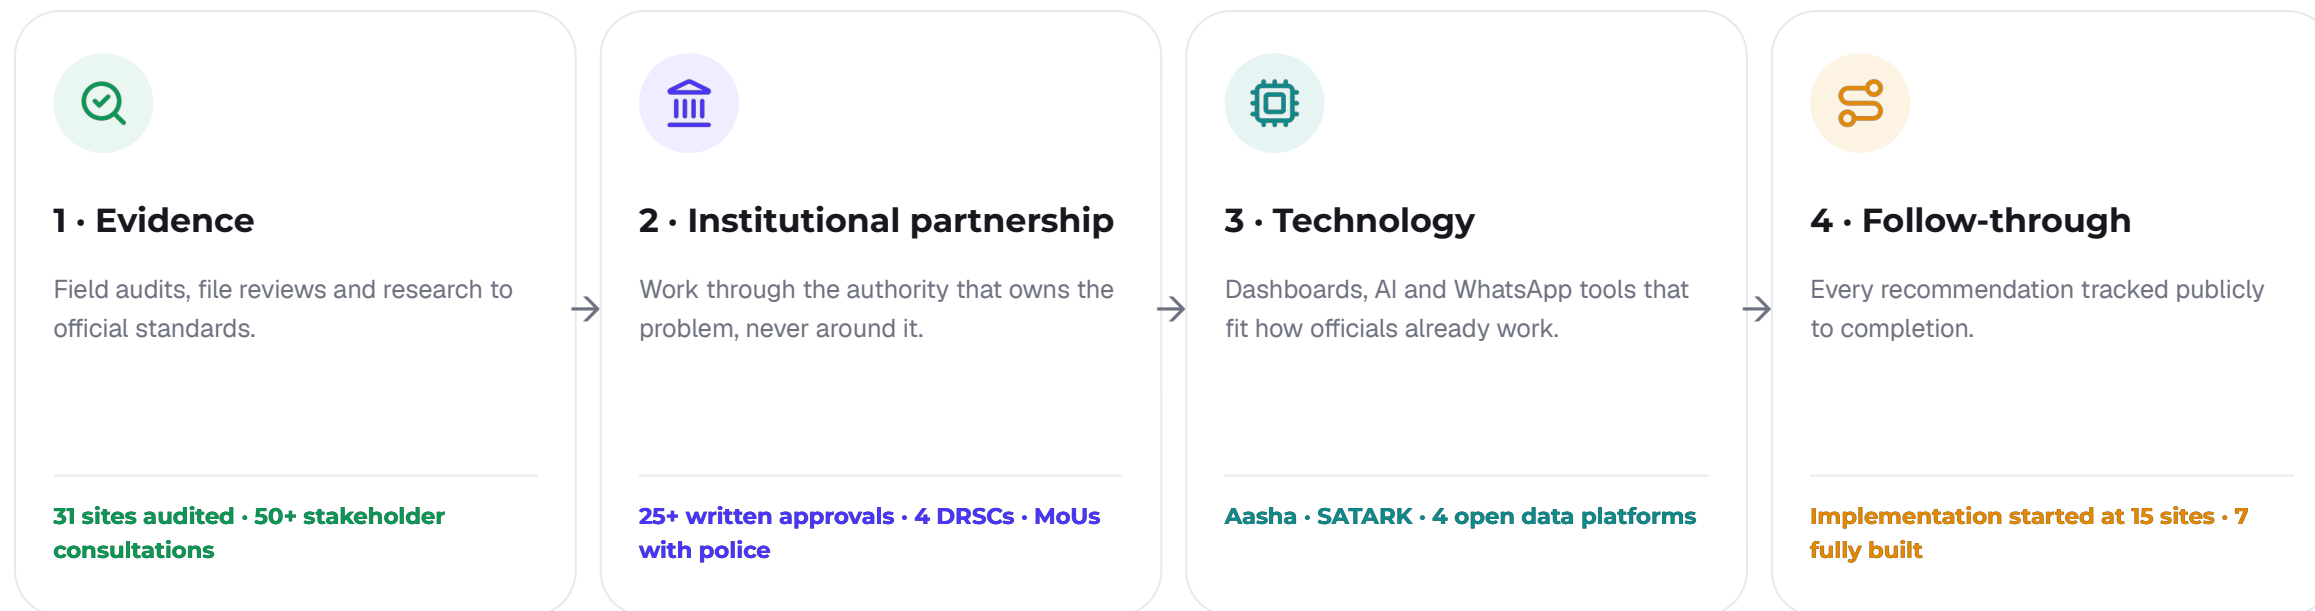

The Group's mandate is our daily work: rider-risk research, vehicle-standards engagement with the people who wrote them, and compliance technology proven with police.

Where we work today, 18 cities, north to south.

Our approach: work **with the system**, and prove it with data

Four steps, applied to every problem we take up, from a dangerous junction to a stalled compensation claim.

We do not replace the system and we do not campaign against it. We add hands, evidence and tools to work the system has already committed to.

Why Working Group 3, and what we bring to it

The Group's mandate matches the deepest part of our portfolio. Three focus areas where we are ready on day one.

Two-wheeler & rider safety evidence

Two-wheeler riders carry the fastest-growing share of road deaths; our published study and 300-rider fieldwork sit exactly here.

Vehicle standards & commercial fleets

Expert sessions on two-wheeler ADAS and bus fire safety, with the veterans of ARAI, CMVR-TSC and CIRT, and an industry vantage point through Cars24.

Compliance technology for fleets

SATARK screens vehicles at scale with police; our aggregator review shows exactly where challan verification breaks down.

The fastest-growing risk on Indian roads rides a two-wheeler

Gig and delivery work concentrates the exposure: entire working days on the road, on vehicles and licences that see comparatively little scrutiny.

~45%

of India's crash fatalities are two-wheeler users, and the share rises year on year

23.5 M

gig and platform workers projected by 2029-30 (NITI Aayog)

1 in 2

delivery riders in a 431-rider Mumbai crash study had already been in a crash

This is also where our road safety and compensation work meet: many gig riders injured on the job are unaware of the compensation they are entitled to. Roughly 70% of the families at our crash-compensation helpdesks are vulnerable road users. Our NextMile ideathon saw student teams working on delivery-rider safety and on compensation reform arrive, independently, at the same population.

Enforcement sees the pressure too: Bengaluru's challans against delivery riders rose from 30,968 in 2023 to 63,718 in the first nine months of 2025.

Delivery-rider outreach with Swiggy and Instamart riders, Road Safety Month 2026.

'When Risks Become Routine', published February 2026

A study of the road risk produced by delivery and ride-hailing work: 40 pages, 87 references, fieldwork on the road with riders.

Structural & occupational conditions

Pay-per-piece incentive design and delivery timelines create sustained time pressure over long shifts.

Operational & behavioural risk

Helmet non-compliance, largely self-taught rider training, and phone use while riding under app-driven time pressure.

Data fragmentation

Crash and near-miss data sit separately with platforms, insurers and police; no one holds a shared view of rider-level risk.

A regulatory blind spot

Low-speed e-bikes under 250W / 25 km/h require no licence or registration, leaving a growing share of last-mile fleets outside routine enforcement.

Infrastructure & site design

The layout of dark stores and delivery hubs can itself push riders into unsafe manoeuvres, through poorly designed access roads and pick-up zones.

FIELDWORK, NOT ONLY DESKWORK

The study included shadowing a delivery rider through a full nine-hour shift, documented on video, to capture pacing, routing and time pressure directly.

INTERNATIONAL PRECEDENT

Spain's 2021 Riders' Law brought algorithmic transparency to dispatch systems; Australia maps delivery-rider risk as a system. India's conversation is only beginning.

A 300-rider study is now under way, to quantify what we surfaced

The published brief gives a clear qualitative picture. The study now in the field sizes it, by hearing directly from riders at scale.

How often

How frequently riders actually experience near-misses and crashes, measured across a large sample rather than a handful of conversations.

Which factors

Which risk factors matter most in practice: fatigue, incentive design, training gaps, so interventions start where the risk is.

Which riders

What distinct rider profiles exist, so that training, equipment and platform changes can be targeted rather than generic.

IN THE FIELD NOW · 2026

Reviewed by the people who know the terrain: research design reviewed by Dr. Richa Ahuja (IIT Kharagpur) · site-design dimension shaped with Dr. Deepty Jain and Prof. Geetam Tiwari (TRIP Centre, IIT Delhi) · enforcement realities from former traffic-police leadership of Delhi, Gurugram and Bengaluru.

Vehicle compliance among aggregators, an early look

A February 2025 review of traffic challans against ride-hailing vehicles across four platforms, exploratory, and revealing.

56.8%

of ride-hailing vehicles reviewed carried more than three recorded challans

40+

challans on a single vehicle, the outlier a per-vehicle view surfaces and an aggregate statistic hides

2020

the Aggregator Guidelines first required e-challan clearance records; the 2025 revision makes clearance a precondition

The rule already exists. A vehicle still carrying forty-plus outstanding challans, found well after the requirement took effect, points to a gap in verification and enforcement rather than in the rule itself. That is a technology and process problem, and it is one we have worked on before.

SATARK shows per-vehicle verification working at scale: over 3,00,000 vehicles screened with police in Jaipur, Bengaluru and Gurugram, surfacing exactly the repeat-offender vehicles an onboarding check needs to catch.

Working sessions with the people who wrote the standards

Two expert sessions pair the authors and auditors of India's vehicle-safety standards with newer technology and operational practice.

Two-wheeler safety technology

ADAS for two-wheelers, and the case for a national two-wheeler safety stack.

Balraj Bhanot, former Director ARAI, former Chairman CMVR-TSC & BIS TED-28, with Aayush Kumar, COO & co-founder, BYTES (acquired by Cautio).

Bus safety

Fire detection and suppression systems, and the gap between code and ground-level compliance.

Dattatraya Saste, former Technical Consultant MoRTH and former Convener, Bus Code & Safety Regulations, with Shekhar Dhole, Technical Secretariat in-charge, CIRT; Panel Convenor, AIS-052/119.

These sessions were a first step, and the relationships hold: with ARAI, CMVR-TSC and CIRT veterans, and with two-wheeler ADAS developers, all available to this Working Group.

A safety conversation on gig work, ready to begin

Gig-work policy so far has been framed around social security and labour conditions. This Working Group can convene its road safety dimension.

What we heard from the Ministry

Our consultation with the Ministry of Labour and Employment confirmed the framing: platform-work policy centres on welfare boards, insurance and social security.

What is happening elsewhere

The road safety dimension of gig work has begun receiving dedicated attention in Vietnam and Taiwan; a comparable conversation in India is yet to take shape.

Who needs to sit together

Platforms, police, insurers, regulators and researchers each hold a fragment of rider risk. No one holds the shared view; a Working Group table can.

ALREADY CONSULTED FOR THIS WORK

Ministry of Labour & Employment

V.V. Giri National Labour Institute

Traffic police leadership: Delhi · Gurugram · Bengaluru

Ex-operations, Swiggy & Zomato

Fairwork India researchers

TRIP Centre, IIT Delhi · IIT Kharagpur

Young policy talent is already **working this problem**

Delivery-rider safety was the most-discussed track of our NextMile policy ideathon, and it feeds a standing dialogue with experts.

NextMile grand finale, New Delhi: the delivery-rider safety track produced three finalist teams.

Rider pods for fatigue management

Team Strategists (IIM Bangalore) proposed pod-based fatigue management, drawing on a Chennai model.

The SafeMile Protocol

Team A² (Kolkata) proposed aligning delivery ETAs to safe-speed benchmarks, with tiered delivery windows and digital rest-break enforcement.

A standing dialogue

Our National Road Safety Dialogue Series has run a dedicated session on delivery-rider safety, with platforms and researchers in the room.

Our stated priority from that work: rider safety taken forward with governments and platforms together, small pilots first, progress reported transparently.

A combination that is rare to find together

Few organisations working on vehicle standards, fleets or aggregator regulation sit inside both the industry and the research worlds at once.

Technical access on request

Standing relationships with the people who have written and audited India's vehicle-safety standards, from ARAI and the CMVR Technical Standing Committee to CIRT's bus-code veterans and two-wheeler ADAS developers.

An industry vantage point

Visibility into vehicle markets, fleet operations and used-vehicle certification that comes from our founding by Cars24, alongside the research and policy work.

A two-wheeler and last-mile evidence base

A growing, increasingly quantified body of research on the two-wheeler and gig-rider segment specifically, the fastest-growing source of road deaths in the country.

A safety-specific view on aggregators

Early evidence on vehicle-compliance verification gaps, and a perspective on aggregator accountability that sits alongside, rather than duplicates, the social-security lens.

Four concrete offers to **Working Group 3**

All four are ready today, need no funding from the Board, and can begin within weeks.

1

A rider-risk evidence base for standards

The published study, the 300-rider quantification now in the field, and rider profiles that let two-wheeler, fleet and aggregator standards start from measured risk.

2

Technical access to standards veterans

Standing relationships with ARAI, CMVR-TSC and CIRT veterans and two-wheeler ADAS developers, available for drafting, review and technical input.

3

A safety-specific view on aggregators

Early vehicle-compliance evidence, and working relationships with platforms, police and labour institutions, for an aggregator conversation framed on road safety.

4

Compliance technology, proven with police

SATARK's per-vehicle screening experience, offered as working input to verification and enforcement design for commercial and aggregator fleets.

We would be honoured to contribute to Working Group 3.

Our evidence, our district relationships, our technology and our expert bench are available to the Board, in whichever form is most useful.

"We already know what is going wrong. What we need now is more responsibility, more discipline, more respect for life."
