

FOR DISCUSSION · CRASHFREE INDIA × TRAFFICURE · GOOGLE MAPS PLATFORM

The safety layer

Traffic data already manages congestion.
Together it can start preventing crashes.

-  **School Safety Index × speed — prototype built, launching with government**
-  **Live crash hotspots — found in the data, fixed through Project Rakshak**
-  **The district knowledge pack — joint thought leadership, monthly, where decisions are made**

Three ideas, one ask: one district's data, 90 days, MVPs built together.

Crashfree India School Safety Index DELHI NCR PILDT - METHOD v0.1 Rankings Methodology

**How safe is the road outside the school gate?
We grade it, school by school, in public.**

Each school's road frontage is assessed from dated Google Street View imagery against the visible requirements of IRC SP-32:2023 — India's school-zone road standard — scored by an AI auditor, independently verified, and published with the exact evidence images. Lowest grades first: they are the priority list.

3,814 schools identified across Delhi NCR	90% have Street View imagery	54% imagery from 2024 or newer	5 audits published (verified)	5 graded C or D — priority sites
--	--	--	---	--

Rankings — worst first

#	GRADE	SCHOOL	SCORE	IMAGERY DATE	STATUS
1	D	Tiksha Modern Public School F-3528, Hanuman Mandir Road, Block F, Sadaspur, Karawal Nagar, New Delhi, Delhi, 110090, India	03/00	2026-04	VERIFIED
2	D	Sona Modern Public School - Best CBSE School in Kharpur, Delhi A-3/4, Devi Rd, Kharpur Village, Kharpur, New Delhi, Delhi 110080, India	01/00	2026-04	VERIFIED
3	D	Raghubir Singh modern school 126, Road No. 7, Rajan Enclave, Vikas Nagar, Dimgal Vihar, Uttam Nagar, Delhi, 110059, India	10/100	2022-04, 2025-11	VERIFIED
4	D	Ganga International School, Rohini plotlet 8, Sector 21, Rohini, New Delhi, Delhi, 110088, India	15/100	2026-04	VERIFIED
5	D	Rookford Convent Sr Sec School Shwari Park Colony, Sector 10A, Gurgaon, Haryana 122001, India	30/100	2026-04	VERIFIED

Grades reflect visible infrastructure on the imagery date only — see the [methodology](#) for scope, limits and the correction process. Scores within ±5 points are equivalent. A low grade is a demand on the road-owning authority, not a criticism of the school. Audits are published in small verified batches; this table grows continuously.

School Safety Index, Delhi NCR prototype, live.

Road-Infrastructure Defect Repository, live.

What TrafficCure is, and what Pune proved

Software only. No cameras, no sensors. Google Maps probe data, turned into a working tool for the people who run the roads.

- 

Built by Lepton Software

Google Maps Platform Premier Partner, working with Google since 2010. TrafficCure launched 2025.
- 

Runs on Roads Management Insights

Google's public-sector traffic feed, launched Aug 2025. Every road, refreshed every 2 minutes.
- 

Live with Pune City Traffic Police

Deployed January 2026, activated in weeks. Corridors also measured in Delhi, Hyderabad, Ahmedabad.

WHY PUNE MATTERS TO US

The police did not stop at watching traffic.

They ranked their worst junctions, diagnosed why each fails, and handed the municipal corporation an engineering brief. Fixes got built.

Data → ranked list → brief to authority → built fix.

That is exactly how Project Rakshak works. Same operating theory, different data.

THE PUNE RESULT, POLICE-MEASURED

Five signals in the feed, **read through a safety lens**

The product was built to manage traffic. Every signal in it has a second life in safety.

Live speeds

Every road, every 2 minutes

How fast traffic really moves past a school gate at 8 am.

Speed history

Hourly, by road, in BigQuery

Baselines: what is normal, what changed after a fix was built.

Vehicle counts

Per road, per hour

Exposure: how many vehicles pass the danger. Priority = risk × exposure.

NEW · MAY 2026

Harsh braking

Anonymised points, junction scale

Near-misses, visible before the crash. Their guide calls it the safety signal nobody else has.

NEW · MAY 2026

User reports

Crashes and hazards, from Maps users

Incidents the official record may never see.

NEW · MAY 2026

Grade every school gate by measured danger

A public 0–100 grade for the road outside every school. Built, live for 3,814 Delhi NCR schools, launching with government. Speed past the gate is the one input it still lacks.

WHY

~10,000

minors die on Indian roads every year (MoRTH)

4.6%

of crashes happen in school & college zones (e-DAR)

0

Indian cities rank school-zone danger today

WHY CFI × TRAFFICURE

WHY CFI

The index exists: IRC:SP:32 method, verification, public report cards — and DRSC seats to launch it with government.

WHY TRAFFICURE

The one input a photo cannot give: speed past the gate at school-run hours, plus counts as exposure. No one else has it.

NEXT STEPS, SPECIFICALLY

- 1**

Week 1

Demo access + technical session on 10 gate corridors, already defined on our cloud project.
- 2**

Weeks 2–6

Speed-exposure scoring on the ~100-zone government-launch batch; thresholds agreed up front.
- 3**

Weeks 6–10

Speed layer into the public index; student teams field-verify the worst 20 zones.
- 4**

This quarter

Government launch of the index — speed layer in, both names on it.

Live: the index, worst grades first.

A school's report card, evidence pinned.

Find danger in the data, fix it on the ground

Official blackspot lists go stale for years. The feed refreshes the danger map monthly — and Rakshak already turns danger maps into audits, joint plans and built fixes.

THE DESK DIAGNOSIS — ANSWERS THAT TODAY NEED A PHYSICAL AUDIT

**When** Speeding windows: 11 pm chaos or 8 am school-run?

**Where** Braking clusters mark the exact conflict point

**Why** Stop-go congestion, free-flow speeding, or design failure

**Who** Counts say how many people the danger exposes

A Rakshak fix under construction — one of 15 in implementation.

Field teams arrive knowing the corridor's story — **the visit confirms it and designs the fix.**

WHY CFI
150+ audits a year, 25+ authority approvals, 4 DRSC seats to table joint plans — and a public tracker for every step.

WHY TRAFFICURE
The only live all-roads feed, plus the Pune playbook: ranked list → engineering brief → built fix.

First 90 days: overlay braking on Jaipur's 96 crash clusters · baseline 2 sites entering construction · live speed panel on the Rakshak dashboard.

An authority approval letter. Every site tracked in public:
crashfreeindia.org/rakshak/dashboard

Joint thought leadership, on the table where districts decide

A co-branded CFI × TrafficCure pack on the district's key traffic problems — monthly or bi-monthly, tabled at the District Road Safety Committee.

HOW THE FEED BECOMES THE PACK

**Raw speeds & delay**

→ Worst five corridors, ranked by measured speed and delay

**School-hour speeds**

→ School gates above safe speed at 8 am, named

**Harsh-braking points**

→ The district's top conflict junctions, mapped

**Before / after**

→ Did last meeting's action work? Measured, not claimed

WHY CFI

We sit on four DRSCs, and we write evidence the way government reads it. The pack enters the statutory record.

WHY TRAFFICURE

The data no district has ever seen about itself — attributed, every month, in the room.

The quiet door: around that table sit the district's decision-makers — administration, police, PWD, transport. A page they rely on every month is the most natural introduction a data partnership can have. District trust is where state conversations begin.

GURUGRAM ROAD SAFETY BRIEF · SEPT 2026

- 01

Corridor watch
NH-48 service road slowest at 6 pm; speeds up 12% at night
- 02

School gates
3 gates above 40 km/h during morning school-run
- 03

Conflict points
Iffco Chowk ramp: highest braking density this month
- 04

Action check
Sector 29 signal retiming: -18% delay, held for 6 weeks
- 05

For the record
One recommendation for this meeting, with the data behind it

Illustrative contents · co-branded · one page

Six lines of work, one connected system

A nonprofit registered as the Vision Zero Trust · Co-founded by Cars24 and the Indian Road Safety Council · 18 cities · everything below is live.

Project Rakshak
Student-led road audits, fixed with authorities
31 sites · 15 in implementation

SATARK enforcement
AI support that helps police find high-risk vehicles
3,00,000+ vehicles screened

Victim support
Aasha chatbot, calculator, hospital helpdesks
100+ victims helped in first 4 days

Open public data
Four self-updating data platforms, free to use
36 states & 50 cities covered

School Safety Index
Public grading of school-zone road safety
3,814 Delhi NCR schools mapped

Youth & policy
NextMile ideathon and national dialogue series
2,000+ participants engaged

SATARK: AI that helps police stop the right vehicle

Built with Cars24 engineers. Reads number plates, checks government records, and alerts officers to repeat offenders, in real time.

Rambagh Circle, Jaipur, live plate, pending challans and dues on a public billboard.

Officer view, challans, RC & compliance status.

3,00,000+

vehicles screened

₹30 Cr+

pending challan value identified

350+

high-risk vehicles intercepted

70,019

vehicles found with pending challans

LIVE · Jaipur & Bengaluru

NEW · Gurugram

Bengaluru's Trinity Circle billboard was India's first, covered by Deccan Herald and national press. Pune and Ahmedabad are next.

One district, 90 days, **three MVPs built together**

Everything on our side is funded and ready. The ask is small and specific.

WHAT WE WILL DO — AT OUR COST

-  SSI MVP: speed-exposure scores on the ~100-zone launch batch; field-verify worst 20
-  Rakshak MVP: braking overlay on Jaipur's 96 clusters; live speed panel on the public dashboard
-  Knowledge pack MVP: first co-branded district brief, tabled at a DRSC we sit on
-  Student field teams, verification, government formatting, all follow-through

WHAT WE ASK OF TRAFFICURE + GOOGLE

-  Demo access for ONE district — Gurugram or Jaipur: speeds, counts, harsh braking
-  One technical session: Lepton + Maps + CFI, on our corridors, this week
-  Terms for public, attributed use in the index, the dashboard and the pack
-  A named counterpart to review the MVPs with us at day 90

The shape of the next 90 days: demo access on one district → three MVPs built on real data → reviewed together at day 90 → then we decide, with evidence, how far to go. If an MVP fails its test, we say so and shelve it.

Traffic data already runs the daily commute. Together it can start preventing the crash.

Three ideas, one district, ninety days. We bring the method, the field force and the government seats; the data does the rest.
